CariScreen ATP Test

Baseline Chart

Charting of aciduric and acidogenic bacteria implicated in the dental caries processes. Individuals who remain "at risk" are highly susceptible to dental caries (tooth decay) and require corrective antimicrobial therapy to help correct the bacterial imbalance.

Name: _____ Date: _____

* Based on Featherstones clinically proven Caries Risk Assessment.
 * Caries risk criteria as defined by the American Dental Association Council on Scientific Affairs, JADA August 2006.
